

Olamide Olumomi

Birmingham, United Kingdom | +447860225767 | oolumomi@outlook.com | linkedin.com/in/momiolamide | github.com/scientist-Momi | oolumomi.dev

PERSONAL SUMMARY

Second-year Computer Science and Artificial Intelligence student at Birmingham City University with practical experience in data analysis, model training and software development. Passionate about building intelligent systems that solve realistic challenges and always eager to learn, adapt and collaborate. Seeking a year-long industry placement that offers opportunities to apply my skills in software engineering, data analytics, or AI systems development.

TECHNICAL SKILLS

Programming: Java, Python, PHP, JavaScript, SQL, Spring, Laravel, HTML, CSS, Vue.js

AI/ML: TensorFlow, Scikit-Learn, OpenCV

Tools: Git, GitHub, MySQL, PostgreSQL, Postman, VSCode, Arduino, Raspberry Pi, Figma

EDUCATION

BSc (Hons) Computer Science with Artificial Intelligence | Birmingham City University | 83.7% | Sept. 2023 – May 2027

Relevant Modules (all First Class):

- **Computer Systems and Architecture:** Delved deep into how computer hardware interacts with software, and how electronics principles are applied.
- **Computer Programming:** Designed, built and tested software applications, applying programming principles and software best practices.
- **Data Structures and Algorithms:** Explored the different key data structures and algorithms while also gaining hands-on experience implementing and analysing them.
- **Artificial Intelligence and Machine Learning:** Built, trained and evaluated machine learning models with real-world datasets.
- **Web Services Development:** Developed RESTful APIs and full-stack web applications using Python Flask and PHP.
- **Database Engineering:** Designed and managed relational databases for data operations.

Foundation year in Computing Technology | Birmingham City University International College | 91.1% | Sept. 2023 – May 2024

Relevant modules: Design Concept, Interactive Learning Skills, Communication, Programming Techniques, ICT Skills, Numerical Techniques, Business Studies.

WORK EXPERIENCE

Backend PHP Developer | Gratmus Digital Services | May 2023 – January 2024

- Developed a scalable backend system serving over 2,000 active users for a Virtual Top Up (VTU) application.
- Integrated payment gateways, including Monify and Flutterwave, via RESTful APIs to manage and support secure online payments.
- Implemented secure authentication and custom wallet system using OAuth2 and JWT standards to ensure transaction integrity and user data protection.
- Documented and deployed API endpoints and workflows using Postman for efficient team collaboration and seamless integration between frontend and backend.

Warehouse Operative | DPD UK | November 2023 - present

- Contributed to the smooth operation of a high-volume parcel sorting warehouse hub.
- Ensured accuracy and efficiency in parcel handling and routing under strict time constraints.
- Collaborated effectively with team members and supervisors to meet daily delivery targets.
- Developed transferable skills in time management, teamwork, and reliability.

PROJECTS

Koob Library App (Full-Stack) | Personal Project | koob.oolumomi.dev | github.com/koob_frontend | 2025

Developed a full-stack book and article management application using PostgreSQL, Spring, and Vue.js:

- Integrated Google Books API for seamless search and import of book and article metadata.
- Implemented an AI-powered agent leveraging Spring AI and OpenAI model to assist users with queries, integrating natural language processing and prompt engineering for accurate, context-aware responses.
- Utilised Bucket4j for rate limiting and request monitoring, ensuring scalable traffic management and fair resource allocation.
- Engineered a personalised recommendation system to suggest books and articles based on user preferences.

- Optimised data access by incorporating PostgreSQL, ensuring high-performance retrieval and management of extensive book and article metadata.
- Managed source control with Git and deployed to Heroku Cloud and Cloudflare pages, achieving automated deployments and high availability.

Obesity Classification Model (Machine Learning) | School Project | github.com/obesity-level-prediction-model | 2025

Developed a Random Forest-based ensemble model to classify obesity risk levels using Python, scikit-learn and pandas, working with original health data.

- Conducted data preprocessing and feature engineering to handle missing values and encode categorical variables.
- Applied Random Forest Algorithms for robust, ensemble-based classification, achieving high predictive accuracy.
- Performed hyperparameter tuning to optimise model performance and reduce overfitting.
- Analysed feature importance to identify key lifestyle and health factors heavily influencing obesity risk.
- Visualised model performance metrics and learning curve using Matplotlib and Seaborn for clear, data-driven insights.
- Documented the full machine learning workflow from data preparation to model evaluation and interpretation.

Qwaklan Customer-Product Management System (Full-Stack) | Personal Project | qwaklan.oolumomi.dev | github.com/frontend-cpms | 2025

Utilised MySQL, Spring and Vue.js to build a sophisticated system that manages customer accounts and product inventory.

- Implemented data visualisation using dynamic graphs and charts to track and analyse product sales, returns, and customer activities.
- Built robust authentication and authorisation controls, facilitating role-based admin permissions and access management.
- Utilised MySQL for relational data storage, ensuring efficient data organisation and fast query performance.
- Integrated jsPDF library for receipt formatting and generation, enabling dynamic creation of transaction receipts.
- Applied Pinia for efficient state management in the Vue.js frontend.
- Designed a modern, user-friendly interface with TailwindCSS, providing intuitive and visually appealing web pages.

Smart AI Glasses for Law Enforcement | Group Project | Innovation Fest 2025, Birmingham City University

Led a team of five to plan, design and develop a prototype of AI-powered smart glasses for law enforcement officers.

- Demonstrated strong leadership, teamwork and cross-disciplinary collaboration skills throughout the project.
- Designed the project circuitry and 3D prototype using TinkerCAD.
- Built the hardware prototype using hardware components such as Raspberry Pi, Pi Camera, OLED Display, microphone, and speaker.
- Integrated OpenCV for facial recognition, and SpeechRecognition for voice input processing.

VOLUNTEERING AND EXTRACURRICULAR ACTIVITIES

- **Winner, New Horizons Nigeria Inter-Branch Project Showcase:** Recognised as the overall winner among multiple branch entries for innovation and technical excellence.
- **Attendee, Birmingham Tech Week - AI Symposium:** Participated in several discussions around the emerging trends in Artificial Intelligence and interacted with industry experts on its applications.
- **IT Support Volunteer, Community Church:** Assisted with setup and maintenance of technical equipment and digital systems and showcased problem-solving, adaptability and collaboration.
